

DISCOVERY → BUILD BRIEF

Build Capture Schema

Every variable the demo and the price are computed from, with its symbol, source class, and the cell it fills. A discovery call is complete when every D-row below is filled. The L, B and C rows are here to mark the boundary, they are not yours to capture on the call.

Build capture schema

The call's real interface with the build. Each row is one variable; the call is done when every **D** row is filled. Symbols and formulas match the technical discovery script and the dashboard build brief exactly.

FIELD	SYMBOL	FROM	CLASS	TYPE · UNIT	CONSTRAINT	FEEDS (CELL / FORMULA)
HOURS BACK · THE ONE CLIENT-FACING COMPUTED METRIC						
Minutes per task, per workflow	m_w	Q4–6	D	min/instance	Per-task, captured beside its own v_w. Held ~20% conservative.	M_w
Instances per week, per workflow	v_w	Q4–6	D	count/week	Same week as m_w. Per-task, never one global volume.	H roll-up · Part B band
Conservatised minutes per task	M_w	derived	D	min/instance	= conservatise(m_w). Locked on the per-task yes.	Hours_back numerator
Completeness	C_w	build	B	ratio 0–1	Fraction the system does end-to-end. Carries routine incompleteness.	Hours_back numerator
Successful runs	V_success_w	logs	L	count	Displacement only: tasks they used to do by hand.	Hours_back numerator
Flagged / handed-back runs	V_flagged_w	logs	L	count	The exceptions. Run-tagged so no run is counted twice.	Hours_back subtrahend
Oversight minutes per flag	M_flag_w	build	B	min/flag	Measured flag-raised → flag-resolved. Empirical, not estimated.	Hours_back subtrahend
PRICE · SETUP FIXED TO TIER, RETAINER THE FLEXIBLE PIECE						
Per-unit value	u_val	Q11	D	£	Committed out loud by them, not inferred.	Rev_m
Units per month	u_pm	Q11	D	count/month	Committed. Also the Part B volume band.	Rev_m · Part B
Monthly revenue	Rev_m	Q11 derived	D	£/month	= u_val × u_pm. Confirmed back before use.	Tier · Part C
Headcount	headcount	setter brief	D	count	From the setter brief, confirmed not re-asked.	Tier (max with Rev)
Tier placement	Tier	derived	D	1–6 / Ent	= max(tier(Rev_m), tier(headcount)). Enterprise escalates first.	SetupFee
Scope	scope	Q2 + reflect	D	set of 3	Exactly the three confirmed pains → Appendix B workflows.	Part A · Engine build list

D

discovery-locked · captured on the call

B

build-set · the engineer fixes after

L

logs · fills from live data post go-live

C

client-owned · never measured by us

FIELD	SYMBOL	FROM	CLASS	TYPE · UNIT	CONSTRAINT	FEEDS (CELL / FORMULA)
TILES AND NODES · WHAT MAKES THE BOARD READ AS THEIRS						
Unit-of-work word	word_unit	Q1 / Q2	D	string	Their term (placement / matter / patient / borrower). Confirmed live.	All tile labels
Appointment word	word_appt	Q13	D	string	Their term (showing / viewing / consult / survey).	Showing-booked tile label
Channel list	chan[]	Q7	D	list, named	Platform names, not categories. Include the quiet channels.	Captured · Lead sources · health strip
Daytime miss exists	missed_call	Q8	D	bool	The busy / on-the-tools miss. Distinct from after-hours.	Missed-call recovery source
Working-hours boundary	[t_open,t_close]+days	Q9 (NEW)	D	time + days	REQUIRED. Without it the after-hours partition is undefined.	Answered after hours · overnight · Standard
System of record	sys	Q10	D	product name	Exact product, not “a CRM.” Naming, not integrating.	CRM-sync node label
Qualification ruleset	θ	Q12	D →	struct	Fields + cut + bands. Shape on call, hardened in 3-day build.	Qualified = count(score ≥ cut)
			B			
Route map	route_map	Q12 / Q16	D	band→person	Which band goes to whom.	Routing · feed “routed to [name]”
Dormancy window	T_dormant	Q14	D	duration	Concrete window (after how long cold), not “it varies.”	Nurture wake trigger
Wake trigger	trig	Q14	D	predicate	Listing-match / renewal date / recall interval.	Nurture wake feed
Reminder cadence	cadence	Q15	D	schedule	The confirmation / reminder rhythm.	Reminders node
No-show, qualitative	no_show_words	Q15	D	string	Words only. Never a baseline number you’d claim a delta on.	Reminders (benchmark only)
Staff names + split	staff[] · split	Q16	D	list	Actual first names and who gets what.	Team activity (per-person)
Owner dependency	owner_dep	Q16b	D	bool / scale	Does it run without them. Pain signal + qualifier.	Build justification (no tile)
Buyer map	buyer_map	Q17	D	list	Everyone who holds a yes, in the demo room.	Demo invite (no tile)
NEVER CAPTURED · CLIENT-OWNED, NO ROSEBUD VISIBILITY						
Conversion stages	showing_completed · offer_made	—	C	—	Stay blank on the board. The client measures these in their CRM.	Nothing. The boundary the model protects.

FORMULA REFERENCE

Hours_back = sum_w [(V_success_w · M_w · C_w) - (V_flagged_w · M_flag_w)] / 60
Rev_m = u_val × u_pm | Tier = max(tier(Rev_m), tier(headcount)) | SetupFee = fixed(Tier)
Retainer = PartA(scope) + PartB(band(u_pm)) + PartC(0.02 × Rev_m, cap £40k) ; floor £2,500
Qualified = count(score(lead, θ) ≥ cut) | Answered_after_hours = count(response_ts ∉ [t_open,t_close])
